The HLG-600H series are highly efficient (with active PFC), waterproof, AC-to-DC LED power supplies, primarily for heavy duty lighting applications. With a 90~305VAC wide AC input range the HLG-600H series will naturally operate with general 115VAC or 230VAC main input, but can also be operated with 277VAC.

The HLG-600H are able to operate in ambient temperatures from a chilly -40°C (-40°F) up to +70°C (158°F). They are also able to withstand vibration up to 5 Gs, and have industrial-level immunity against instantaneous surges up to 4kV. HLG600-H will work reliably in a wide variety of indoor and outdoor, dusty, moist, and vibrating environments. The "A-Type" will work with many thermoelectric applications.

HLG-600H is available in two models (*A & B Types):

- A- Type allows manual adjustment of DC output voltage (from 85~105%) and/or the output current (between 50~100%). IP 65 approved.
- B- Type is equipped with a three-in-one dimming function. Input/Output by cable. IP 67 approved.

Suitable for any indoor or outdoor high power LED lighting application and ideal in installations with moisture and/or dust requiring exceptional reliability.

NOTE	<ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Tolerance : includes set up tolerance, line regulation and load regulation. Constant current operation region is within 50%-100% rated output voltage. This is the suitable operation region for LED related applications, but please reconfirm special electrical requirements for some specific system design. Derating may be needed under low input voltages. Please check the static characteristics for more details. A type only. Safety and EMC design refer to EN60598-1, subject CNS15233, GB7000.1, FCC part18. Length of set up time is measured at cold first start. Turning ON/OFF the power supply may lead to increase of the set up time. The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. Refer to warranty statement

■ Static Characteristics

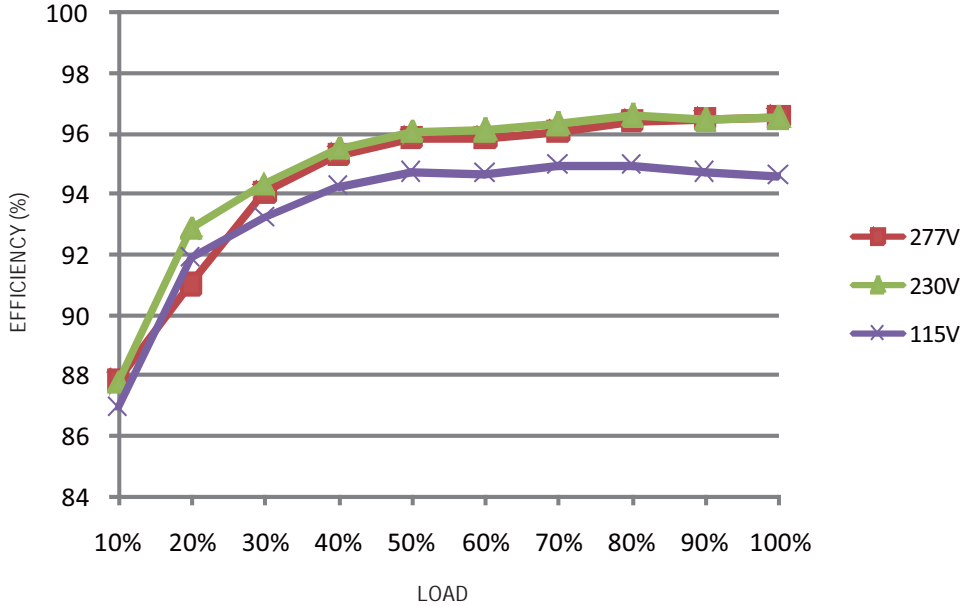

Note : At high ambient temperature $T_a=70^{\circ}\text{C}$, if HLG-600H operates in C.C mode, the maximal current must not be greater than 60% of the rated current.

■ Power Factor Characteristic

EFFICIENCY vs LOAD (54V Model)

HLG-600H series possess superior working efficiency that up to 96% can be reached in field applications.

DRIVING METHODS OF LED MODULE

There are two major kinds of LED drive method "direct drive" and "with LED driver".

A typical LED power supply may either work in "constant voltage mode (C.V) or constant current mode (C.C)" to drive the LEDs.

Mean Well's LED power supply with C.V+ C.C characteristic can be operated at both C.V mode (with LED driver, at area (A) and C.C mode (direct drive, at area (B)).

Typical LED power supply I-V curve

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems.

Should there be any compatibility issues, please contact MEAN WELL.

■ DIMMING OPERATION (for B Type only)

※ Built-in 3 in 1 dimming function, IP67 rated. Output constant current level can be adjusted through output cable by connecting a resistance or 0 ~ 10Vdc or 10V PWM signal between DIM+ and DIM-.
