The MED-RPS 160 Series was re-designed to comply with (MOPP level) international medical safety regulations so that they are now suitable for both "patient contact" and "non-patient contact" (MOOP level) medical applications.

The MED-RPS-"G" 160 version is slightly different from the standard model and is specifically enhanced to meet Green Mode energy-saving requirements regulated by Energy Star and EuP. Functions of the "G" version include P.G./ P.F. signal output, built-in remote sense and remote ON/OFF control and a 5V/0.6A standby output. Together with a "no- load power consumption <0.75W," MED-RPS-"G" 160 is suitable for use in "green mode" medical equipment or electric devices that need to meet that energy-saving requirement. MED-RPS-160 series are also suitable for any medical equipment requiring low leakage current.

Tolerance : includes set up tolerance, line regulation and load regulation. 4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) 5. HS1, HS2 & HS3 can not be shorted. 6. Derating may be needed under low input voltages. Please check the derating curve for more details. 7. The rated power includes 5Vsb @ 0.6A. 8. The rated power includes 5Vsb @ 0.8A. 9. Touch current was measured from primary input to DC output. 10. Suitable for BF application with appropriate system consideration.
